## To find your ring size

Use this chart: it includes Spanish measures and diameter millimeters. In the next page, there is also a table of equivalence with International measures.

Make sure your printer is to scale $100 \%$ and once printed, check that this bar lenght is exactly 50 mm :
$\qquad$
Put your ring over the circles bellow and find the one that closely matches the inside of your ring: this is the measure we are looking for.

The difference between sizes is minimum, but if in doubt, I advise you to choose the largest.
